

LIST OF FIGURES

| Sr. No | Figure | Page No. |
|--------|--|----------|
| 1 | Non Enzymatic Reaction of Excessive Glucose in Hyperglycemia | 10 |
| 2 | Increased intracellular glucose metabolism enhanced superoxide generation | 12 |
| 3 | Polyol pathway induced oxidative stress | 15 |
| 4 | Normal and dextrose induced experimental cataract goat lenses | 81 |
| 5 | Observation of lens morphology when incubated with medicinal plant extracts and vitamin c respectively | 85 |
| 6 | Total Soluble Proteins (mg/lens) in all groups | 87 |
| 7 | Malondialdehyde (MDA) levels (n moles/gm lens) in all groups | 89 |
| 8 | Specific activity of Superoxide dismutase (units/mg lens) in all groups | 91 |
| 9 | Specific activity of Glutathione Peroxidase (GPx)(units/mg lens) in all groups | 94 |
| 10 | Specific activity of Glutathione Reductase (GRx)(units/mg lens) in all groups | 97 |
| 11 | Specific activity of Aldose Reductase (GRx)(units/mg lens) in all groups | 100 |
| 12 | Percentage difference caused by Jambhul extract on Total soluble proteins, MDA and specific activities of enzymes Superoxide dismutase, Glutathione peroxidase, Glutathione reductase and Aldose reductase compared to dextrose induced cataract group | 101 |

| | | |
|----|--|-----|
| 13 | Percentage difference caused by Bael extract on Total soluble proteins, MDA and specific activities of enzymes Superoxide dismutase, Glutathione peroxidase, Glutathione reductase and Aldose reductase compared to dextrose induced cataract group | 102 |
| 14 | Percentage difference caused by Amla extract on Total soluble proteins, MDA and specific activities of enzymes Superoxide dismutase, Glutathione peroxidase, Glutathione reductase and Aldose reductase compared to dextrose induced cataract group. | 103 |
| 15 | Percentage difference caused by Garlic extract on Total soluble proteins, MDA and specific activities of enzymes Superoxide dismutase, Glutathione peroxidase, Glutathione reductase and Aldose reductase compared to dextrose induced cataract group. | 104 |
| 16 | Percentage difference caused by Vitamin C on Total soluble proteins, MDA and specific activities of enzymes Superoxide dismutase, Glutathione peroxidase, Glutathione reductase and Aldose reductase compared to dextrose induced cataract group. | 105 |
| 17 | Hyperglycemia induced oxidative stress | 113 |
| 18 | Involvement of Polyol Pathway in diabetic complications | 133 |
| 19 | Structure of β -glucogallin | 135 |
